

## Coursework 2 – the demo process

There are 3 components of the submission

1. The source code of your solution
2. A cover sheet (NOT the usual form for the desk)
3. A report describing your solution

1 & 2 are electronic dropbox submissions and 3 is a paper document. It is not necessary to hand anything in to the Student Desk.

1. Clean & zip your **project/solution** and submit it to the NOW dropbox
2. Download a **cover sheet** from NOW (it is a docx doc); you need to fill in your personal details (name/group/NTU ID) and give a short description of each of the data structures you are submitting. This description is an overview, not a report – there is an example of a completed one on NOW which shows what is wanted. This will be printed by your tutor and you must sign it *at the demo*.
3. You should print out the **report** and take the paper version to your demo; it will be part of the demo process and the tutor will retain it. ~~Please~~<sup>1</sup> ensure it is bound/stapled together securely and has your name, number & lab group on it.

Your demo will be during your regular lab session, with the surgery session also available. Details of the particular slots available will be emailed, and you should reply to that email when it arrives.

---

<sup>1</sup> This is not optional!
